REPORT

REPORT ON THE BIRTHS, DEATHS AND MARRIAGES REGISTERED IN SCOTLAND DURING THE QUARTER ENDED 31ST MARCH 1946.

Summary.—The principal features of the Return for the first quarter of 1946 are a birth-rate (18·1 per 1,000) which is well above the average and, with the exception of the rate in 1943, is the highest recorded for any first quarter since 1938, a civilian death-rate (16·3 per 1,000) which shows little change from the five years' average,* a marriage-rate (7·9 per 1,000) which is considerably above the pre-war average, and with the exception of the high rates prevailing in the first quarter of the early war years, 1940, 1941 and 1942, is the highest rate recorded for any corresponding quarter since 1921. The infant mortality-rate (69 per 1,000 live births) is 15 below the five years' average, and with the exception of the rate in 1945, it is the lowest recorded for the first quarter of any year. The neo-natal rate (deaths of infants under one month) was 33. The death-rate from all forms of tuberculosis (82 per 100,000) shows a downward trend compared with the early war years, and the maternal mortality was 2·1 per 1,000 live births. It is the lowest maternal mortality-rate ever recorded for any quarter in Scotland.

Births, still-births and deaths are corrected throughout this report by transfer to usual place of residence, if in Scotland, with the exception of Service deaths and civilian deaths from war operations, none of which are allocated to any local area. Marriage figures are as registered.

The estimated civilian population at 31st March 1946 of Scotland of the Large Burghs and of the Counties (excluding Large Burghs) will be found in Table I. Local birth, death and marriage-rates, the publication of which was suspended during the war, are now shown in this Table. The death-rate is calculated on the civilian deaths, but the birth and marriage-rates are based on a total population which includes an allowance for men and women in the Services. The estimated total population of Scotland at 31st March 1946 was 5,137,000.

Live Births.—The 22,909 births in the quarter under review are 1,266 more than in the corresponding quarter of 1945, the rate per 1,000 population, 18·1; being 1·2 above. It is 0·5 above the average. The birth-rate in the aggregate of large burghs is 18·3 as compared with 17·9 for the rest of Scotland. In individual areas the rate ranged in burghs from 26·8 in Port Glasgow, 22·4 in Coatbridge and 22·2 in Dumbarton, to 16·5 in Edinburgh, 15·9 in Inverness Burgh and 14·4 in Rutherglen. In counties exclusive of large burghs it ranged from 24·6 in Kinross, 20·5 in Caithness and 20·2 in West Lothian to 15·0 in Zetland, 13·4 in Peebles and 13·2 in Argyll.

The proportion of illegitimate births, 7·9 per cent. is 0·8 below that for the first quarter of 1945, but 0·6 above the average.

Of the 22,909 births registered, 11,746 were of male children and 11,163 of female children, being 1,052 male births per 1,000 females. Births registered in January numbered 7,487, in February 7,089 and in March 8,333, the equivalent birth-rates being 17·2, 18·0 and 19·1 respectively.

Still-Births.—The number of still-births registered during the quarter was 808 and is equivalent to a rate of 34 per 1,000 total births (including still-births).

Marriages—The number of marriages registered, 9,981, is 220 above that for the first quarter of 1945. The rate per 1,000 population was 7·9. It is 0·3 above that for the corresponding quarter of 1945, and 1·5 above the pre-war five years' average (1935-1939). The rate in the aggregate of large

* The averages quoted, except where otherwise specified, are for the corresponding quarter of the five years' immediately preceding, i.e. 1941-1945.

burghs is 9·3 compared with 6·2 for the rest of Scotland. In individual areas the rate in the large burghs ranged from 14·1 in Perth Burgh, 14·0 in Inverness Burgh and 10·9 in Falkirk to 7·5 in Paisley and Motherwell and Wishaw, 6·6 in Dumfries Burgh and 5·9 in Coatbridge. In counties exclusive of large burghs it ranged from 8·0 in East Lothian, 7·8 in Caithness and 7·7 in Kincardine and West Lothian to 4·3 in Sutherland, 4·0 in Berwick and 3·8 in Inverness.

Of the 9,981 marriages registered 1,634 were civil marriages contracted in the office and in the presence of certain specially authorised Registrars in accordance with the provisions of the Marriage (Scotland) Act, 1939, while 1 was an irregular marriage (Decree of Declarator) contracted before that Act came into operation. The remainder, 8,346, were solemnised by a minister of religion. In the corresponding quarter of 1945 civil marriages numbered 1,486 and those with a religious ceremony numbered 8,270.

Marriages registered in January numbered 3,699, in February 2,806 and in March 3,476, the equivalent marriage rates being 8·5, 7·1 and 8·0 respectively.

Deaths.—Deaths registered during the quarter numbered 19,741, and equalled a civilian death-rate of 16·3 per 1,000 population. They are 1,067 more than were registered in the first quarter of 1945. The rate is 0·3 more than in that quarter, but 0·1 below the five years' average. The death-rate in the aggregate of large burghs is 16·9 compared with 15·7 for the rest of Scotland. The rate in individual large burghs ranged from 19·9 in Arbroath, 18·3 in Port-Glasgow and 18·1 in Dundee to 14·1 in Falkirk, 14·0 in Dumfries Burgh and 12·4 in Airdrie. In counties exclusive of large burghs it ranged from 22·9 in Kinross, 21·3 in Peebles and 19·1 in Sutherland to 14·1 in Ayr, Moray, East Lothian and Renfrew, 13·6 in Midlothian and 13·1 in Clackmannan.

Deaths registered in January numbered 7,400, in February 5,939 and in March 6,402, the equivalent death-rates being 17·8, 15·8 and 15·3 respectively.

Infant Mortality.—Deaths of children aged under one year numbered 1,579 and are equivalent to an infant mortality-rate of 69 per 1,000 registered live births. This rate is 1 above that for the corresponding quarter of 1945, but 15 below the five years' average. Among legitimate children the mortality was 65 per 1,000 births and among illegitimate children 115.

The infant mortality for the large burghs was 72, while for the rest of Scotland it was 65. In the large burghs individually it ranged from 129 in Hamilton, 87 in Clydebank and 86 in Port Glasgow to 33 in Rutherglen, 26 in Dunfermline and 20 in Inverness Burgh. In counties exclusive of large burghs it ranged from 97 in Dumfries County, 88 in Stirling County and 86 in Clackmannan to 41 in Caithness, 23 in Selkirk and 14 in Bute.

The neo-natal rate (deaths of infants under one month) was 33 per 1,000 live births and is 3 above the corresponding quarter of 1945.

Causes of Death.—*Principal Epidemic Diseases.*—There were 663 deaths registered during the quarter which were attributed to the principal epidemic diseases, being 405 more than in the first quarter of 1945. The death-rate for this group is 55 per 100,000 of population. The average rate for the corresponding quarter of the five preceding years is 46. These deaths include 1 from typhoid and paratyphoid fevers, 32 from cerebro-spinal fever, 2 from scarlet fever, 24 from whooping-cough, 40 from diphtheria, 545 from influenza and 19 from measles. In the large burghs the highest rates per 1,000 of the population were 1·7 in Rutherglen, 1·4 in Stirling Burgh and 1·0 in Motherwell and Wishaw and in Airdrie. In counties exclusive of large burghs the highest were 1·2 in Sutherland, 1·1 in Dumfries and Kinross and 0·9 in Caithness, Wigtown and Zetland.

[Continued on p. 24.]

* Including all Service deaths and civilian deaths due to war operations.

Continued from p. 3.]

Tuberculosis.—The 1,013 deaths from all forms of tuberculosis are 21 fewer than in the first quarter of 1945. Of them 812 were ascribed to tuberculosis of the respiratory system and 201 to tuberculosis of other organs. The death-rate from all forms of tuberculosis is 82 per 100,000, that from respiratory tuberculosis being 66. The former rate is 1 above that for the first quarter of 1945, and the latter is 3 above. The rates from all forms and from the respiratory form are respectively 8 and 3 below the five years' average.

Malignant Disease.—Deaths from this cause numbered 2,184, and equal a rate of 181 per 100,000. These deaths are 80 fewer than in the first quarter of 1945, and the rate is 3 below the five years' average.

Respiratory Diseases.—Deaths from bronchitis numbered 1,240 and from pneumonia 1,120. The corresponding death-rates per 100,000 population are 103 and 93 respectively. The average rates for the corresponding quarters of the previous five years are 94 and 92 respectively.

Maternal Mortality.—Deaths of mothers from diseases and accidents of pregnancy and childbirth numbered 49 and are equal to a rate of 2.1 per 1,000 live births. This rate is 0.8 below that for the first quarter of 1945 and 2.0 below the five years' average. Including still-births the maternal death-rate is also 2.1 per 1,000.

Violence.—Deaths from violence numbered 727, and are equivalent to a death-rate of 55 per 100,000. Excluding all deaths from war operations they numbered 707 as against 678 in the previous quarter. Of the total deaths assigned to violence 133 were attributed to road transport accidents, a decrease of 45 compared with the previous quarter.

Weather.—The following summary of the weather in the first quarter of 1946 has been compiled by the Meteorological Office, Edinburgh.

January.—The main features of January's weather were prolonged frost and cold in East Scotland, and very unsettled and stormy conditions in the North and East. Day temperatures seldom rose much above freezing and severe night frost occurred. Persistently wet weather prevailed over the greater part of Central and Southwest Scotland, but the East was drier than usual. Sunshine was above average in East Coastal districts. Many gales affected our Western seaboard. Mean barometric pressure,* 29.945 inches, greater than average by 0.048 inch. Mean temperature, 37.1° F. less by 2.1° F. Rainfall 3.91 inches, greater by 1.14 inches.

February.—Mild weather prevailed for the greater part of the month, but the closing week was rather cold, and night frosts occurred locally. A moderate snowfall on the 20th blocked main roads in the Northeast. Total rainfall was well below average over most of Scotland, and sunshine was abundant in the East and South. Mean barometric pressure,* 29.840 inches, less by 0.032 inch. Mean temperature, 41.1° F., greater by 1.8° F. Rainfall 2.19 inches, less by 0.53 inch.

March.—Cold Continental winds kept day temperature down to low level during the first fortnight, but the remaining days of the month were pleasantly mild. Over the country as a whole sunshine totals were poor. The month was the sixth successive March with a deficient rainfall, and parts of North and Central Scotland had 30 to 40 per cent. less rain than usual. Mean barometric pressure,* 30.009 inches, greater by 0.179 inch. Mean temperature, 41.4° F., greater by 0.5° F. Rainfall, 2.13 inches, less by 0.54 inch.

* The mean values are derived from data for a number of the principal towns. Averages of pressure and rainfall refer to the period 1881-1915, and those for temperature to 1906-1935.

REPORT

REPORT ON THE BIRTHS, DEATHS AND MARRIAGES REGISTERED IN SCOTLAND DURING THE QUARTER ENDED 30TH JUNE 1946.

Summary.—The principal features of the Return for the second quarter of 1946 are a birth-rate (20·2 per 1,000) which is the highest quarterly birth-rate since 1930, a civilian death-rate (12·2 per 1,000) which is the lowest recorded in Scotland for any second quarter and a marriage-rate (9·0 per 1,000) which is above the pre-war average. The infant mortality-rate (47 per 1,000 live births) is 17 below the five years' average,* and is the lowest Scottish infant mortality rate recorded for any second quarter. The neo-natal rate (deaths of infants under one month) was 27. The death-rate from all forms of tuberculosis (82 per 100,000) shows a downward trend compared with the early war years, and the maternal mortality (2·4 per 1,000 live births) is the lowest rate ever recorded for any second quarter in Scotland.

Births, still-births and deaths are corrected throughout this report by transfer to usual place of residence, if in Scotland, with the exception of Service deaths (and civilian deaths from war operations), none of which are allocated to any local area. Marriage figures are as registered.

The estimated civilian population at 30th June 1946 of Scotland, of the Large Burghs and of the Counties (excluding Large Burghs) will be found in Table I. Local birth, death and marriage-rates, the publication of which was suspended during the war, are now shown in this Table. The death-rate is calculated on the civilian deaths, but the birth and marriage-rates are based on a total population which includes an allowance for men and women in the Services. The estimated total population of Scotland at 30th June 1946 was 5,135,000.

Live Births.—The 25,849 births in the quarter under review are 3,270 more than in the corresponding quarter of 1945, the rate per 1,000 population, 20·2, being 2·6 above. It is 1·3 above the average. The birth-rate in the aggregate of large burghs is 20·6 as compared with 19·8 for the rest of Scotland. In individual areas the rate ranged in burghs from 28·4 in Airdrie, 27·4 in Hamilton and 23·1 in Coatbridge to 18·7 in Dunfermline, 17·8 in Ayr and 15·8 in Rutherglen. In counties exclusive of large burghs it ranged from 23·7 in Aberdeen, 22·7 in Banff and 22·6 in West Lothian to 15·9 in Sutherland, 15·7 in Argyll and 15·5 in Inverness.

The proportion of illegitimate births, 7·3 per cent., is 1·3 below that for the second quarter of 1945, and 0·2 below the average.

Of the 25,849 births registered 13,354 were of male children and 12,495 of female children, being 1,069 male births per 1,000 females. Births registered in April numbered 8,542, in May 9,055 and in June 8,252, the equivalent birth-rates being 20·2, 20·8 and 19·6 respectively.

Still-Births.—The number of still-births registered during the quarter was 860 and is equivalent to a rate of 32 per 1,000 total births (including still-births).

Marriages.—The number of marriages registered, 11,478, is 906 below that for the second quarter of 1945. The rate per 1,000 population was 9·0. It is 0·6 below that for the corresponding quarter of 1945, and 1·4 above the pre-war five years' average (1935–1939). The rate in the aggregate of large burghs is 10·4 compared with 7·3 for the rest of Scotland. In individual areas the rate in the large burghs ranged from 16·7 in Inverness, 13·1 in Dumfries and 13·0 in Perth to 8·1 in Clydebank and Coatbridge, 8·0 in Airdrie and 6·4 in Dumbarton. In counties exclusive of large burghs it ranged from

* The averages quoted, except where otherwise specified, are for the corresponding quarter of the five years immediately preceding, i.e. 1941–1945.

10.8 in Moray, 10.0 in Nairn and 8.9 in Roxburgh to 4.6 in Selkirk, 4.5 in Sutherland and 3.3 in Inverness.

Of the 11,478 marriages registered 1,843 were civil marriages contracted in the office and in the presence of certain specially authorised Registrars in accordance with the provisions of the Marriage (Scotland) Act, 1939, while 7 were irregular marriages (Decree of Declarator) contracted before that Act came into operation. The remainder, 9,628, were solemnized by a minister of religion. In the corresponding quarter of 1945 civil marriages numbered 1,651 and those with a religious ceremony numbered 10,730.

Marriages registered in April numbered 4,131, in May 2,177 and in June 5,170, the equivalent marriage rates being 9.8, 5.0 and 12.2 respectively.

Deaths.—Deaths registered during the quarter numbered 15,185 and equalled a civilian death-rate of 12.2 per 1,000 population. They are 179 less than were registered in the second quarter of 1945. The rate is 0.8 less than in that quarter, and 1.4 below the five years' average. The death-rate in the aggregate of large burghs is 12.5 compared with 11.9 for the rest of Scotland. The rate in individual large burghs ranged from 14.7 in Arbroath, 14.5 in Hamilton and 13.5 in Rutherglen to 10.6 in Stirling, 10.2 in Clydebank and Dumfries and 10.0 in Coatbridge. In counties exclusive of large burghs it ranged from 19.9 in Nairn, 17.2 in Zetland and 16.9 in Bute to 10.8 in East Lothian and in West Lothian, 10.0 in Stirling and 7.7 in Kincardine.

Deaths registered in April numbered 5,392, in May 5,250 and in June 4,543, the equivalent death-rates being 13.2, 12.4 and 11.1 respectively.

Infant Mortality.—Deaths of children aged under one year numbered 1,221 and are equivalent to an infant mortality-rate of 47 per 1,000 registered live births. This rate is 8 below that for the corresponding quarter of 1945, and 17 below the five years' average. Among legitimate children the mortality was 45 per 1,000 births and among illegitimate children 77.

The infant mortality for the large burghs was 52, while for the rest of Scotland it was 41. In the large burghs individually it ranged from 70 in Falkirk, 69 in Rutherglen and 68 in Dunfermline and Hamilton to 35 in Paisley, 32 in Dumfries and 23 in Airdrie. In counties exclusive of large burghs it ranged from 68 in Caithness, 66 in Roxburgh and 55 in Argyll to 20 in Bute, 15 in Peebles and 10 in Orkney.

The neo-natal rate (deaths of infants under one month) was 27 per 1,000 live births and is 3 below the corresponding quarter of 1945.

Causes of Death.—*Principal Epidemic Diseases.*—There were 158 deaths registered during the quarter which were attributed to the principal epidemic diseases, being 16 less than in the second quarter of 1945. The death-rate for this group is 13 per 100,000 population. The average rate for the corresponding quarter of the five preceding years is 26. These deaths include 26 from cerebro-spinal fever, 2 from scarlet fever, 19 from whooping-cough, 16 from diphtheria, 56 from influenza and 39 from measles. In the large burghs the highest rates per 1,000 of the population were 0.6 in Hamilton, 0.5 in Dumbarton and 0.3 in Kirkcaldy, Airdrie, Motherwell and Stirling. In counties exclusive of large burghs the highest were 0.9 in Nairn, 0.6 in Zetland and 0.4 in Argyll and Inverness.

Tuberculosis.—The 1,048 deaths from all forms of tuberculosis are 2 more than in the second quarter of 1945. Of them 811 were ascribed to tuberculosis of the respiratory system and 237 to tuberculosis of other organs. The death rate from all forms of tuberculosis is 82 per 100,000, that from respiratory tuberculosis being 64. The former rate is 5 below that for the second quarter of 1945, and the latter is 1 above. The rates from all forms and from the respiratory form are respectively 9 and 3 below the five years' average.

[Continued on p. 24.]

TABLE I.—BIRTHS, STILL-BIRTHS, DEATHS AND MARRIAGES IN THE COUNTIES AND LARGE BURGHS OF SCOTLAND, WITH THEIR EQUIVALENT RATES PER 1000 OF POPULATION—QUARTER ENDED 30TH JUNE 1946.

	Estimated Civilian Population. 30/9/46.	Births (living children).		Still- births.	Mar- riages.	Deaths.			Rates per 1000 of Population. †				Illegiti- mate Births per cent. of Total.	Infant Mor- tality Rate per 1000 Births.	Still-births per 1000 Births (including Still- births).

* Including all Service deaths and civilian deaths due to war operations.

Continued from p. 3.]

Malignant Disease.—Deaths from this cause numbered 2,136, and equal a rate of 172 per 100,000. These deaths are 160 fewer than in the second quarter of 1945, and the rate is 11 below the five years' average.

Respiratory Diseases.—Deaths from bronchitis numbered 452 and from pneumonia 507. The corresponding death-rates per 100,000 population are 37 and 41 respectively. The average rates for the corresponding quarters of the previous five years are 45 and 53 respectively.

Maternal Mortality.—Deaths of mothers from diseases and accidents of pregnancy and childbirth numbered 63 and are equal to a rate of 2.4 per 1,000 live births. This rate is 1.0 below that for the second quarter of 1945 and 1.5 below the five years' average. Including still-births the maternal death-rate is also 2.4 per 1,000.

Violence.—Deaths from violence numbered 666, and are equivalent to a death-rate of 50 per 100,000. Excluding all deaths from war operations they numbered 646 as against 707 in the previous quarter. Of the total deaths assigned to violence 152 were attributed to road transport accidents, an increase of 19 compared with the previous quarter.

Weather.—The following summary of the weather in the second quarter of 1946 has been compiled by the Meteorological Office, Edinburgh.

April.—Mean temperature for the month exceeded the average by about four degrees, due in large measure to the high temperatures of the opening days and a warm spell in the third week. Extremely dry conditions prevailed in eastern Scotland, and over the country as a whole it was the driest April since 1938. Sunshine was abundant in the east and south, but records were about average in the west and north. Mean barometric pressure* 30.046 inches; greater by 0.127 inch. Mean temperature 48.0° F.; greater by 3.8° F. Rainfall 1.00 inches; less by 0.98 inch.

May.—Equable conditions were in evidence throughout the greater part of the month and mean temperature was slightly above average, decidedly so in the west, but to a lesser degree in the east. The unusual persistence of north and east winds caused marked dryness in inland and western areas, but gave a rainfall approaching normal over east coastal districts. May was exceptionally sunny everywhere, aggregates which exceeded normal by 80 to 100 hours being widely recorded. At Tiree and Turnberry it was the sunniest May on record. Mean barometric pressure* 30.070 inches; greater by 0.093 inch. Mean temperature 50.1° F.; greater by 0.3° F. Rainfall 1.73 inches; less by 0.65 inch.

June.—The month was mainly dull and cloudy especially in the western Highlands and in parts of Angus. The first three weeks were unusually cool and only in one short period, 24th to 27th, did temperature rise to summer levels. Thunderstorms were frequent and affected wide areas with heavy showers on the 11th, 12th, 18th and 19th. It was a persistently wet month with rainfall well above average in all districts except locally in the south-east and south-west. Mean barometric pressure* 29.813 inches; less by 0.185 inch. Mean temperature 54.4° F.; less by 0.3° F. Rainfall 2.59 inches; greater by 0.51 inch.

* The mean values are derived from data for a number of the principal towns. Averages of pressure and rainfall refer to the period 1881–1915, and those for temperature to 1906–1935.

REPORT

REPORT ON THE BIRTHS, DEATHS AND MARRIAGES REGISTERED IN SCOTLAND DURING THE QUARTER ENDED 30TH SEPTEMBER 1946.

Summary.— Outstanding features revealed by the figures contained in the Return for the third quarter of 1946 are a birth-rate which, at 20·9, is higher than that for any third quarter since 1925 and is the highest quarterly birth-rate since 1928, an infant mortality rate of 45 per 1,000 live births, the lowest ever recorded for any quarter in Scotland, and a maternal mortality rate of 1·7 per 1,000 live births which is also the lowest ever recorded for any quarter in Scotland.

The civilian death-rate (10·8 per 1,000) is the lowest since the third quarter of 1939, and the marriage-rate (9·9 per 1,000) is above the pre-war average. The neo-natal rate (deaths of infants under one month) was 27. The death-rate from all forms of tuberculosis was 70 per 100,000 and from respiratory tuberculosis 56 per 100,000.

Births, still-births and deaths are corrected throughout this report by transfer to usual place of residence, if in Scotland, with the exception of Service deaths, none of which are allocated to any local area. Marriage figures are as registered.

The estimated civilian population at 30th September 1946 of Scotland, of the Large Burghs and of the Counties (excluding Large Burghs) will be found in Table I. Death-rates are calculated on civilian deaths and civilian population, but the birth and marriage-rates are based on a total population which includes an allowance for men and women in the Services. The estimated total population of Scotland at 30th September 1946 was 5,132,000.

Live Births.— The 27,031 births in the quarter under review are 5,687 more than in the corresponding quarter of 1945, the rate per 1,000 population, 20·9, being 4·5 above. It is 3·5 above the average* and is higher than that for any third quarter since 1925. The birth-rate in the aggregate of large burghs is 21·2 compared with 20·5 for the rest of Scotland. In individual areas the rate ranged in burghs from 26·2 in Airdrie, 24·5 in Port Glasgow and 24·4 in Coatbridge to 19·4 in Clydebank, 19·3 in Kirkcaldy and 18·7 in Dumfries. In counties exclusive of large burghs it ranged from 23·6 in Selkirk, 23·0 in Aberdeen and 22·8 in Moray to 15·9 in Argyll, 15·8 in Peebles and 15·6 in Bute.

The proportion of illegitimate births, 6·4 per cent., is 2·4 below that for the third quarter of 1945, and 1·5 below the average.

Of the 27,031 births registered, 13,946 were of male children and 13,085 of female children, being 1,066 male births per 1,000 females. Births registered in July numbered 9,534, in August 8,761 and in September 8,736, the equivalent birth-rates being 21·9, 20·1 and 20·7 respectively.

Still-Births.—The number of still-births registered during the quarter was 850 and is equivalent to a rate of 30 per 1,000 total births (including still-births).

Marriages.— The number of marriages registered, 12,851, is 795 below that for the third quarter of 1945. The rate per 1,000 population was 9·9. It is 0·6 below that for the corresponding quarter of 1945, but 0·8 above the pre-war five years' average (1934–1938). The rate in the aggregate of large burghs is 11·6 compared with 8·0 for the rest of Scotland. In individual areas the rate in the large burghs ranged from 20·8 in Inverness, 16·6 in Perth, and 13·1 in Dumfries to 8·7 in Dumbarton, 8·0 in Port Glasgow and 7·9 in Coatbridge. In counties exclusive of large burghs it ranged from 11·4 in

* The averages quoted, except where otherwise specified, are for the corresponding quarter of the five years immediately preceding, i.e. 1941–1945.

Peebles, 10·3 in Caithness and 10·3 in Zetland to 5·0 in Sutherland, 4·3 in Argyll and 3·1 in Inverness.

Of the 12,851 marriages registered 2,111 were civil marriages contracted in the office and in the presence of certain specially authorised Registrars in accordance with the provisions of the Marriage (Scotland) Act, 1939, while 4 were irregular marriages (Decree of Declarator). The remainder, 10,736, were solemnised by a minister of religion. In the corresponding quarter of 1945 civil marriages numbered 1,908 and those with a religious ceremony numbered 11,737.

Marriages registered in July numbered 4,816, in August 3,536 and in September 4,499, the equivalent marriage rates being 11·0, 8·1 and 10·7 respectively.

Deaths.—Deaths registered during the quarter numbered 13,594, and equalled a civilian death-rate of 10·8 per 1,000 population—the lowest death-rate since the third quarter of 1939. They are 512 more than were registered in the third quarter of 1945. The rate is 0·1 less than in that quarter, and 0·8 below the five years' average. The death-rate in the aggregate of large burghs is 10·9 compared with 10·6 for the rest of Scotland. The rate in individual large burghs ranged from 13·0 in Perth, 12·9 in Arbroath and 12·3 in Inverness to 9·4 in Kirkcaldy, 8·9 in Dumbarton and 8·8 in Airdrie. In counties exclusive of large burghs it ranged from 15·0 in Zetland, 14·5 in Sutherland and 14·4 in Argyll to 9·2 in West Lothian, 9·1 in Nairn and 8·8 in Stirling.

Deaths registered in July numbered 4,755, in August 4,440 and in September 4,399, the equivalent death-rates being 11·2, 10·4 and 10·7 respectively.

Infant Mortality.—Deaths of children aged under one year numbered 1,222 and are equivalent to an infant mortality rate of 45 per 1,000 registered live births. This rate is 1 below that for the corresponding quarter of 1945 and 13 below the five years' average. It is the lowest infant mortality rate ever recorded for any quarter in Scotland. Among legitimate children the mortality was 44 per 1,000 births and among illegitimate children 69.

The infant mortality for the large burghs was 50, while for the rest of Scotland it was 40. In the large burghs individually it ranged from 84 in Port Glasgow, 75 in Perth and 75 in Dumbarton to 28 in Aberdeen, 25 in Ayr and 21 in Kilmarnock. In counties exclusive of large burghs it ranged from 61 in Dumfries, 60 in Kincardine and 59 in West Lothian to 15 in Selkirk, 12 in Sutherland and 0 in Nairn.

The neo-natal rate (deaths of infants under one month) was 27 per 1,000 live births and is 2 above the corresponding quarter of 1945.

Causes of Death.—*Principal Epidemic Diseases.*—There were 105 deaths registered during the quarter which were attributed to the principal epidemic diseases, being 38 more than in the third quarter of 1945. The death-rate for this group is 8 per 100,000 of population. The average rate for the corresponding quarter of the five preceding years is 14. These deaths include 5 from typhoid and paratyphoid fevers, 23 from cerebro-spinal fever, 27 from whooping cough, 19 from diphtheria, 17 from influenza and 14 from measles. There were no deaths from scarlet fever during the quarter. In the large burghs the highest rates per 1,000 of the population were 0·4 in Port Glasgow and 0·3 in Perth; in counties exclusive of large burghs the highest was 0·5 in Kinross.

Tuberculosis.—The 902 deaths from all forms of tuberculosis are 52 more than in the third quarter of 1945. Of them 727 were ascribed to tuberculosis of the respiratory system and 175 to tuberculosis of other organs. The death-rate from all forms of tuberculosis is 70 per 100,000, that from respiratory tuberculosis being 56. The former rate is the same as that for the third

[Continued on p. 24.]

† Including all Service deaths.

Continued from p. 3.]

quarter of 1945, but the latter is 2 more. The rates from all forms and from the respiratory form are respectively 3 below and 2 above the five years' average.

Malignant Disease.—Deaths from this cause numbered 2,220, and equal rate of 176 per 100,000. These deaths are 32 more than in the third quarter of 1945, but the rate is 4 below the five years' average.

Respiratory Diseases.—Deaths from bronchitis numbered 284 and from pneumonia 388. The corresponding death-rates per 100,000 population are 23 and 31 respectively. The average rates for the corresponding quarters of the previous five years are 25 and 35 respectively.

Maternal Mortality.—Deaths of mothers from diseases and accidents of pregnancy and childbirth numbered 47 and are equal to a rate of 1·7 per 1,000 live births. This rate is 0·5 below that for the third quarter of 1945. It is less than half the average of the preceding five years and is much the lowest rate ever recorded for any quarter in Scotland. Including still-births the maternal death-rate is also 1·7 per 1,000.

Violence.—Deaths from violence numbered 624, and are equivalent to a death-rate of 47 per 100,000. Excluding all deaths from war operations they numbered 610 as against 646 in the previous quarter. Of the total deaths assigned to violence 155 were attributed to road transport accidents, an increase of 3 compared with the previous quarter.

Weather.—The following summary of the weather in the third quarter of 1946 has been compiled by the Meteorological Office, Edinburgh.

July.—Mean temperature was about average in the north and west but in eastern and southern districts slightly exceeded average, due largely to pleasantly warm weather in the second week. The month was extremely dull in most districts and only locally in the north and at coastal stations in the east were aggregates up to average. It was in addition the wettest July in recent years, especially so in the west and north. Mean barometric pressure* 29·890 inches, less by 0·039 inches. Mean temperature 58·9° F., greater by 0·6° F. Rainfall 3·43 inches, greater by 0·57 inch.

August.—Day temperatures were well above the seasonable level during the first week, but the remaining days of the month were cool for the time of year. In northern and eastern districts rainfall showed a moderate excess due to persistent rains throughout the month. Excluding the Highlands western areas were drier than usual, though rain days were rather numerous. Sunshine records were about average over most of the country but in the west and north there was a well-marked excess. At Tiree and Stornoway it was the sunniest August since 1939. Mean barometric pressure* 29·756 inches, less by 0·132 inch. Mean temperature 56·5° F.; less by 0·9° F. Rainfall 3·15 inches; less by 0·40 inch.

September.—Except for a cooler period from the 18th to 23rd, temperature was above average, decidedly so in the last week when maxima reached 70° F. in many districts. The nights were unusually warm and temperature in the screen never fell to freezing. In southern districts it was the dulllest September for over 30 years, but sunshine totals in the north were about average. Rainfall in all districts showed a well-defined excess which was greatest towards the south. Totals exceeded twice the normal in parts of central Scotland, and in most districts it was the third wettest September in the last 70 years. Barometric pressure* 29·722 inches; less by 0·255 inch. Mean temperature 55·1° F.; greater by 1·6° F. Rainfall 5·13 inches; greater by 2·67 inches.

* The mean values are derived from data for a number of the principal towns. Averages of pressure and rainfall refer to the period 1881–1915, and those for temperature to 1906–1935.

* Birth and marriage rates in this Table are based on the estimated mean population for 1946 including enlistments.

The death-rates are calculated on civilian

† See note * on page 11.

‡ Including all Service Deaths.

REPORT

THIS REPORT deals primarily with the statistics for the fourth quarter of the year 1946, but as figures for the entire year are now available a short preliminary statement on them is included. A full report of the vital statistics of the year will in due course be incorporated in the Ninety-Second Annual Report. The figures given for the year may be accepted as substantially accurate, although they are provisional and will be superseded by those appearing in the Annual Report. The rates dependent on population in the Annual part of this report are based on a mean estimated population for 1946. In the section dealing with the fourth quarter, the rates for that quarter are based on the estimated population at 31st December 1946. In each case the birth and marriage rates are calculated on a total population which includes an allowance for enlistments, but the death-rates are based on the estimated civilian population.

The principal features of the vital statistics for the year now under review are as follows:—The birth-rate was the highest recorded since 1926. The civilian death-rate was well below the average of the war years, and the marriage rate continues above the pre-war average. The infant mortality rate has declined further and is lower than that recorded in any previous year. The death-rate from all forms of tuberculosis shows an improvement compared with the average, but that for respiratory tuberculosis has increased slightly. The maternal mortality rate is the lowest on record.

Live births registered during the year 1946 numbered 104,406, being equal to a rate of 20·3 per thousand. This rate is 3·4 above that for 1945, and 2·5 above the average for the five preceding years. The birth-rate has varied from 17·7 in 1938, 17·4 in 1939, 17·1 in 1940, 17·5 in 1941, 17·6 in 1942, 18·4 in 1943, 18·5 in 1944, 16·9 in 1945 to 20·3 in 1946. The natural increase for the year, i.e. the excess of births over deaths, was 39,801 as compared with an average of 25,297. Still-births numbered 3,470 as compared with 2,949 in 1945, the rate being 32 per 1,000 births live and still, as against 33 in 1945. In 1939 when still-births were first registered in Scotland, the rate was 42, in 1940 it was also 42 but in every year to 1944, when it was 32, it has shown a decline. Illegitimate live births numbered 6,904 as compared with 7,454 in 1945. This is equal to a rate of 6·6 per 100 live births and is the lowest since 1941. The proportion of male live births per 1,000 female was 1,066, being 3 more than in 1945.

Marriages registered during the year numbered 45,831. The marriage-rate, 8·9 per thousand, is 0·5 below that for 1945. It is 0·4 above the five years' average (1941–1945) and 1·3 above the pre-war average (1934–1938).

Of these 45,831 marriages 38,251 were solemnised by Ministers of religion, 38,114 being preceded by proclamation of banns or by publication of notice, and 137 authorised by Sheriff's licence in accordance with the provisions of the Marriage (Scotland) Act, 1939. Civil marriages contracted in the offices of authorised Registrars in accordance with the provisions of that Act numbered 7,565. The remainder (15) were registered on the authority of an Extract Decree of Declarator pronounced in the Court of Session.

Deaths from all causes numbered 64,605 and equalled a civilian death-rate of 13·1 per thousand. It is 0·1 below that for 1945 and is 0·7 below the five years' average.

Deaths of children under one year numbered 5,621, representing an infant mortality rate of 54 per thousand live births. This rate is 2 below that for 1945 and 14 below the five years' average. It is lower than any previous Scottish infant mortality rate, the previous lowest being 56 in 1945. The neo-natal rate (deaths of infants under one month) was 30 per thousand and is 1 above that for 1945. Among legitimate children the infant mortality rate

was 51 per thousand, 2 less than in 1945, while among illegitimate children it was 89, 1 more than in 1945.

Table IIA shows the total number of deaths registered in Scotland during the year, classified by sex and cause, and also the numbers for both sexes by age and cause in combination. When the deaths by age groups are compared with those of the previous year, decreases are found in every group between ages 1 and 24 and in group 35-44. Increases are observed in all groups from 45-54 upwards, the greatest occurring in the group 75-84.

There is a large increase in the number of deaths aged under 1 year but this is due solely to the high number of births and, as stated above, the infant mortality rate has declined. The decrease in the number of deaths at ages 15-24 is partly accounted for by the smaller number of service deaths.

The number of deaths from the principal epidemic diseases* was 1,074 compared with 650 in 1945. The civilian death-rate was 22 per 100,000 compared with 14 in 1945. The increase was more than accounted for by the number of deaths from influenza which was 680 compared with 205 in 1945. The principal decrease was in the number of deaths from diphtheria which was 91 compared with 126 in the previous year. This is the smallest number of deaths ever registered in Scotland from diphtheria. In 1940 the number was 676 and in 1941 517. Deaths from whooping-cough numbered 103, a decrease of 17 compared with the previous year. Deaths from measles numbered 85, a decrease of 4 compared with the previous year. These deaths are well below the five years' average. Deaths from scarlet fever numbered 5 and are the lowest ever recorded. From cerebro-spinal fever the number was 102, an increase of 15 compared with the previous year. These deaths have shown a steady decline since the outbreak in 1940 when they numbered 482. Deaths from typhoid fever (including paratyphoid) numbered 8. In 1945 the number was also 8.

Deaths from tuberculosis (all forms) numbered 3,983 as against 3,803 in 1945. The civilian death-rate is 79 per 100,000, being the same as in the previous year. This number is considerably above that for the years immediately preceding the war. Deaths from respiratory tuberculosis numbered 3,226, being 294 more than in 1945. The rate was 64 per 100,000, being 4 above that in the previous year.

Deaths from syphilis (including parasymphilitic diseases) numbered 217, a decrease of 12 compared with the previous year.

Deaths from malignant disease numbered 8,858 and were 187 less than in 1945. Compared with the average they were 170 more.

Deaths from heart disease numbered 17,359 and were 1,310 more than in 1945. They account for 27 per cent. of all deaths.

Deaths from diseases of the respiratory system (not tubercular or malignant) numbered 6,274 as compared with 5,441 in 1945. They included 2,726 from pneumonia and 2,590 from bronchitis, the civilian rates being 56 and 53 respectively. In 1945 they numbered respectively 2,163 and 2,412.

Deaths from diseases and accidents of pregnancy and childbirth numbered 237 as against 249 in the previous year. This represents a maternal mortality rate of 2.2 per thousand births (live and still). This rate is 0.6 below that for 1945 and is the lowest ever recorded for Scotland. It is 1.4 below the five years' average and less than half that experienced 10 years ago.

Deaths from congenital debility and diseases of early infancy numbered 3,162 and were 502 more than in 1945. If, however, deaths from these causes are related to births, there is actually a decline, the rate per 1,000 births being 30 in 1946 as against 31 in 1945. In 1935 the number of deaths from this group of causes was 3,449, in 1925 it was 3,970 and in 1915, 4,666.

Deaths attributed to violent causes numbered 2,681 and are 263 fewer than in 1945. Of these 314 were ascribed to suicide, 590 to road transport

* See note * on page 11.

* Including erysipelas, septicaemia, dysentery, acute poliomyelitis and lethargic encephalitis.

accidents and 1,777 to other forms of violence, the numbers from these causes in 1945 were 323, 571 and 2,050 respectively.

Attention has already been drawn to the principal features brought out by Table IIA. In addition it may be noted that deaths from diabetes have decreased to 535 (in 1945 they were 632). From cerebral hæmorrhage and allied conditions they numbered 7,787 as against 7,689; from diseases of the liver 430, as against 488 in 1945. Deaths from gastric and duodenal ulcer have decreased from 557 in 1945 to 528 in 1946. From diarrhœa they number 833 (1,046 in 1945). From nephritis they were 1,291 (1,289 in 1945), and from old age 1,900 (1,944 in 1945).

In Table IA will be found the principal numbers and rates for Scotland, Large Burghs and Remainder of Counties, with individual figures for each large burgh.

REPORT ON THE BIRTHS, DEATHS AND MARRIAGES REGISTERED IN SCOTLAND DURING THE QUARTER ENDED 31ST DECEMBER 1946.

Summary.—The principal features of the Return for the fourth quarter of 1946 are as follows:—The birth-rate is 22.1 and is the highest recorded for any quarter since 1926. The actual number of births registered is greater than that for any quarter since the second quarter of 1923. The death-rate (12.7) is 0.9 below the five years' average* and the marriage-rate (8.9) is 1.3 above the pre-war average. The infant mortality rate is 56, which is the lowest recorded for any fourth quarter. The maternal mortality rate, 2.7 per 1,000 live births, is well below the average, but the rate from tuberculosis shows an upward tendency.

Births, still-births and deaths are corrected throughout this report by transfer to usual place of residence, if in Scotland, with the exception of Service deaths and civilian deaths from war operations, which are not allocated to any local area. Marriage figures are as registered.

Live Births.—The 28,617 births in the quarter under review are 7,252 more than in the corresponding quarter of 1945, the rate per 1,000 population being 22.1. It is 5.0 above the average. The birth-rate in the aggregate of large burghs is 22.8 as compared with 21.4 for the rest of Scotland. In individual areas the rate ranged in burghs from 27.3 in Stirling, 25.7 in Dundee and 25.4 in Port Glasgow to 19.9 in Dumbarton, 19.0 in Kilmarnock and 18.5 in Rutherglen. In counties exclusive of large burghs it ranged from 26.9 in Banff, 25.2 in Aberdeen and 25.1 in West Lothian to 16.7 in Nairn, 15.8 in Zetland and 14.9 in Orkney.

The proportion of illegitimate births, 5.2 per cent., is 2.9 below that for the fourth quarter of 1945 and 2.3 below the average. No lower percentage has been recorded in any quarter for the past 30 years.

Of the 28,617 births registered, 14,825 were of male children and 13,792 of female children, being 1,075 male births per 1,000 females. Births registered in October numbered 9,696, in November 9,224 and in December 9,697, the equivalent birth-rates being 22.3, 21.9 and 22.3 respectively.

Still-Births.—The number of still-births registered during the quarter was 952 and is equivalent to a rate of 32 per 1,000 total births (including still-births).

Marriages.—The number of marriages registered, 11,521, is 1,413 fewer than that for the fourth quarter of 1945. The rate per 1,000 population was 8.9. It is 1.1 below that for the corresponding quarter of 1945, but 1.3 above

* The averages quoted, except where otherwise specified, are for the corresponding quarter of the five years immediately preceding, i.e. 1941–1945.

the pre-war five years' average (1934–1938). The rate in the aggregate of large burghs is 10·1 compared with 7·5 for the rest of Scotland. In individual areas the rate in the large burghs ranged from 17·2 in Inverness, 13·5 in Dumfries and 12·7 in Perth to 7·4 in Dumbarton, 7·3 in Port Glasgow and 6·9 in Stirling. In counties exclusive of large burghs it ranged from 12·2 in Nairn, 10·1 in Moray and 9·9 in Wigtown to 5·6 in Perth and in Ross and Cromarty, 5·1 in Kinross and 4·3 in Inverness.

Of the 11,521 marriages registered, 1,977 were civil marriages contracted in the office and in the presence of certain specially authorised Registrars in accordance with the provisions of the Marriage (Scotland) Act, 1939, while 2 were irregular marriages (Decree of Declarator) contracted before that Act came into operation. The remainder, 9,542, were solemnised by a Minister of religion. In the corresponding quarter of 1945 civil marriages numbered 1,796 and those with a religious ceremony numbered 11,135.

Marriages registered in October numbered 3,825, in November 2,907 and in December 4,789, the equivalent marriage-rates being 8·8, 6·9 and 11·0 respectively.

Deaths.—Deaths registered during the quarter numbered 16,085 and equalled a civilian death-rate of 12·7 per 1,000 population. They are 550 more than were registered in the fourth quarter of 1945 but the rate is 0·2 less than in that quarter and 0·9 below the five years' average. The death-rate in the aggregate of large burghs is 13·2 compared with 12·1 for the rest of Scotland. The rate in individual large burghs ranged from 15·7 in Dumbarton, 15·4 in Perth and 14·1 in Arbroath to 11·3 in Aberdeen, 11·0 in Inverness and 10·6 in Kilmarnock. In counties exclusive of large burghs it ranged from 16·9 in Kinross, 16·3 in Bute and 15·5 in Inverness and in Roxburgh to 10·5 in Aberdeen and in Dunbarton, 10·3 in West Lothian and 10·1 in Clackmannan.

Deaths registered in October numbered 4,797, in November 5,213 and in December 6,075, the equivalent death-rates being 11·3, 12·6 and 14·3 respectively.

Infant Mortality.—Deaths of children aged under one year numbered 1,599 and are equivalent to an infant mortality rate of 56 per 1,000 registered live births. This rate is 1 below that for the corresponding quarter of 1945 and 11 below the five years' average. Among legitimate children the mortality was 54 per 1,000 births and among illegitimate children 98.

The infant mortality for the large burghs was 62, while for the rest of Scotland it was 48. In the large burghs individually it ranged from 130 in Dumbarton, 99 in Airdrie and 87 in Stirling to 29 in Dunfermline and Inverness and 28 in Kirkealdy. In counties exclusive of large burghs it ranged from 95 in Bute, 86 in Kinross and 69 in Roxburgh to 26 in Kirkeudbright and Banff and 15 in Kincardine. There were no infant deaths in Orkney.

The neo-natal rate (deaths of infants under one month) was 32 per 1,000 live births and is 4 above the corresponding quarter of 1945.

Causes of Death.—*Principal Epidemic Diseases.*—There were 148 deaths registered during the quarter which were attributed to the principal epidemic diseases, being 3 fewer than in the fourth quarter of 1945. The death-rate for this group is 12 per 100,000 of population. The average rate for the corresponding quarter of the five preceding years is 31. These deaths include 2 from typhoid and paratyphoid fevers, 21 from cerebro-spinal fever, 1 from scarlet fever, 33 from whooping-cough, 16 from diphtheria, 62 from influenza and 13 from measles. In the large burghs the highest rates per 1,000 of the population were 0·5 in Clydebank, 0·4 in Airdrie and 0·3 in Dundee and in Rutherglen. In counties exclusive of large burghs the highest were 0·5 in Kinross and 0·3 in Argyll, Roxburgh and Sutherland.

[Continued on p. 28.]

TABLE I.—BIRTHS, STILL-BIRTHS, DEATHS AND MARRIAGES IN THE COUNTIES AND LARGE BURGHs OF SCOTLAND, WITH THEIR EQUIVALENT RATES PER 1000 OF POPULATION—QUARTER ENDED 31ST DECEMBER 1946.

† Including all Service deaths.

Continued from p. 7.]

Tuberculosis.—The 1,018 deaths from all forms of tuberculosis are 149 more than in the fourth quarter of 1945. Of them 862 were ascribed to tuberculosis of the respiratory system and 156 to tuberculosis of other organs. The death-rate from all forms of tuberculosis is 79 per 100,000, that from respiratory tuberculosis being 66. The former rate is 8 above that for the fourth quarter of 1945 and the latter is 9 above. The rates from all forms and from the respiratory form are respectively 5 and 7 above the five years' average.

Malignant Disease.—Deaths from this cause numbered 2,293, and equal a rate of 182 per 100,000. These deaths are 4 more than in the fourth quarter of 1945, but the rate is 2 below the five years' average.

Respiratory Diseases.—Deaths from bronchitis numbered 612 and from pneumonia 712. The corresponding death-rates per 100,000 population are 49 and 57 respectively. The average rates for the corresponding quarters of the previous five years are 54 and 61 respectively.

Maternal Mortality.—Deaths of mothers from diseases and accidents of pregnancy and childbirth numbered 77 and are equal to a rate of 2·7 per 1,000 live births. This rate is 0·2 below that for the fourth quarter of 1945 and 0·8 below the five years' average. Including still-births the maternal death-rate is 2·6 per 1,000.

Violence.—Deaths from violence numbered 660, and are equivalent to a death-rate of 51 per 100,000. Excluding all deaths from war operations they numbered 652 as against 610 in the previous quarter. Of the total deaths assigned to violence 145 were attributed to road transport accidents, a decrease of 10 compared with the previous quarter.

Weather.—The following summary of the weather in the last quarter of 1946 has been compiled by the Meteorological Office, Edinburgh.

October.—After the first week fair but rather cold anticyclonic weather predominated. Over large tracts of the country little rain fell after the 5th, and on the whole the month was the driest October on record. Sunshine totals were appreciably below average in East Scotland, but it was the sunniest October since 1939 in most west and north-west districts. Mean barometric pressure,* 30·178 inches, greater by 0·301 inch. Mean temperature, 47·3° F., less by 0·7° F. Rainfall 0·57 inch, less by 2·80 inches.

November.—With a mean temperature 2·6° F. above average the month was unusually mild. During the first fortnight day maxima exceeded 65° F. in some districts and the high reading of 69° F. at Edinburgh on the 4th was a November record for Scotland. Rainfall and sunshine totals were about average in the north-west but elsewhere the month was extremely dull and wet. Storms in the last fortnight confined east coast fishing fleets to harbour for several days. Mean barometric pressure* 29·672 inches, less by 0·178 inch. Mean temperature 44·3° F., greater by 2·6° F. Rainfall 5·40 inches, greater by 2·08 inches.

December.—In all Mainland districts mean temperature was below average and frosts were frequent. Sunshine aggregates were up to average over most of Scotland but some Clyde areas were rather duller than usual. The month was dry over the northern half of the country except in the Shetlands, and very dry round the Moray Firth. To the south totals were up to average. Mean barometric pressure* 29·863 inches, less by 0·092 inch. Mean temperature 37·4° F., less by 2·2° F. Rainfall 3·49 inches, less by 0·17 inch.

* The mean values are derived from data for a number of the principal towns. Averages of pressure and rainfall refer to the period 1881–1915, and those for temperature to 1906–1935.
